ABSTRÄCT

This report contains a tabular summary of the results of the April 1974 City-wide reading test administered in Grades 2 through 9 in all New York City public schools. Test results are presented at three levels for comparative analysis: New York City with other major cities, community school districts within N.Y.C., and community schools within districts. Test results data are presented in arithmetic means, medians, and percentages allowing for varied means of analysis. Results indicate that citywide averages improved from 1973 to 1974 in Grades 3 and 7 and declined in Grade 9. The remaining five grades remained at the same level. Citywide percentages of pupils reading at or above grade level decreased two-tenths of one percent. Taking into account the reading achievement statistics for the city as a whole and for its component community school districts, the report concludes that there has been a high degree of stability in reading achievement over the past four years. PUPIL READING ACHIEVEMENT

IN

NEW YORK CITY

A Report of the April 1974 Reading Test Survey

Grades 2 through 9

New York City Public Schools

ERRATA

- 1. Tables 4B and 4C (Pages 8-11) do not include scores for District 32 for 1971, 1972 and 1973-because during those years District 32 was part of District 16.
- District and school registers included in the report are total registers and do not represent the number of children tested.
- 3. The scores of the grades and schools listed below are to be deleted due to discrepencies in test administration:
 - I.S. 263 Brooklyn Grades 6, 7 and 8
 I.S. 57 Brooklyn Grade 8

Acknowledgments...

This report was prepared by the Office of Educational Evaluation.

The members of the Office of Educational Evaluation responsible for the context, tabular presentations, and editing within the report were:

Mr. Jerome H. Colligan, Coordinator of Citywide Testing

Mr. John Falletta, Statistician

*Mr. Paul Basso, Assistant Statistician

Administrative assistance in tabulating, typing, and proofreading, was supplied by: Mrs. Nerida Acevedo, Mr. Calvin Butler, Mrs. Ann Clarfield, Mrs. Dorothy Conquer, Mrs. Patricia Horn, Mrs. Sylvia Wallberg and Mrs. Gurney White.

New York City and Other Major Cities

achievement data for the ten largest cities (in terms of public school populations) in the United States. The proportion of students scoring below grade norm for these cities ranged from a low of 61.0 percent to a high of 74.0 percent. These figures indicate a general reading achievement debility throughout the major urban centers in the United States. Further, New York City would compare favorably with these other cities based on these percentages evincing a percent below grade norm lower than seven other major cities.

Section B.

New York City Pupil Reading Achievement Compared to Mational Norms

- Table 2. Distribution of City-Wide Reading Means and Medians and Number Tested 1971, 1972 and 1973 and 1974
- Table 3. Distribution of City-Wide Pupil Proportions At Various Reading Levels and N.E. Pupils Excluded From Testing 1971, 1972 and 1973 and 1974

The test result data in Tables? and 3 that follow present both mean and median reading grade scores and proportions of pupils at various reading levels for four successive annual testings in New York City Public Schools. There were 5 increases in means and medians from 1973 to 1974, 4 decreases and 7 remaining the same. Overall the four year trend seems to indicate a relative stability in descriptive statistics for New York City reading achievement results.

Table 3 proportions evince the same relative stability of pupil achievement results for the last four years.

^{*} MEAN: The arithmetic average - the sum of all scores divided by the number of scores.

^{**} MEDIAN: The midpoint of an array of scores ranging from high to low.

Introduction

In recent years, standardized reading tests have been administered annually in all grades from the second through the ninth. Following the enactment of the Community School District Act of 1970 by the New York State Legislature, the time of administration of these tests was regularized to April of each school year. The reading tests are administered for two reasons: First, to satisfy a stipulation of the Act to rank all schools according to proportion of pupils reading at and above grade norm and, second, to provide central, district, and school administrators with objective bases for instructional, organizational and personnel policy decisions.

The reading tests used are standardized on a nationwide pupil population and contain test items measuring vocabulary and reading comprehension. The latter is defined as ability to understand general themes of selection, deriving meanings of words in context, recalling significant details and the ability to infer some new fact from the information given. Rive grade levels of the test were available for use in the reading survey and individual schools selected those levels deemed most appropriate for the reading abilities of their pupils. Criteria for level selection were supplied to the schools by the Office of Educational Evaluation.

This report contains a summary of the results of the April, 1974 city-wide reading test administered in Grades 2 through 9, in all New York City Public Schools.

The report presents test results for comparative analyses at three levels: New York City with other major cities; Community School Districts within New York City; Community Schools within Districts.

The test results data are presented in means (arithmetic averages), medians (mid-points), and percentages.

These test, result data are presented in a variety of forms to afford the reader varied opportunities for analysis. For instance the means and medians in Table 2, presented for four consecutive years, allow a longitudinal look at reading achievement in any grade during that period of time. The proportions in Table 3 are also presented in a longitudinal format.

Section C of the report contains all descriptive and achievement data for all Community School Districts in New York City. Districts may be compared on reading achievement levels proportions, and Non-English speaking proportions. Citywide averages in those categories are also available.

Further statistical District comparisons utilizing means and medians in Tables 4band 4c are possible over a four year period. The amount of change or stability within districts or between districts may also be noted from these mean and median data.

The data in Section D of the report provides the reader with the same comparative bases for analyses within any specific district. All schools within a district are listed in numerical order by level — elementary and then intermediate/junior high school. Pupil populations in each school, and achievement levels proportions are contained in a district summary table in each district section.

Mean and median school data by grade for three consecutive years are also presented in each district section. These data may be used to note change or stability within any one school or between any schools within that district.

An analysis of the April 1974 results indicates that citywide averages improved from 1973 to 1974 in Grades 3 and 7 and declined in Grade 9. The remaining five grades remained at the same level. Moreover, citywide percentages of pupils reading at or above grade level decreased two tenths of one percent - from 34.0 to 33.8 percent. This two tenths of one percent decrease, it should be noted, reflects the achievement of approximately 1,400 pupils. The significance of the 33.8 percent figure can best be understood by noting that the nationwide expectancy of achievement in any standardized group test is such that 50 percent of the students will be at or above grade and 50 percent will be below the grade level.

The citywide mean scores for each of the grades tested during the past four years are presented in the body of Table 2 in Section B. Since the reading tests are given in April, the seventh month of the school year, the norm, i.e., the expected average score of students in Grade 3, for instance, would be approximately 3.7. The mean figures in Table 2 should be interpreted in the light of this statistical concept.

In summary, taking into account the reading achievement statistics for the city as a whole and for its component community school districts, it is reasonable to conclude that there has been a high degree of stability in reading achievement over the past four years.

TABLE 3

Section C.

Community School Districts Within New York City

Tables 4, 4b and 4c that follow present descriptive pupil data for each community school district within New York City.

Table 4 indicates the extent of the range of percentages in pupil achievement levels as well as the numbers of pupils enrolled within each district.

Tables 4b and 4c present four-year data in means (4b) and medians (4c) for each grade within each district. Again the range in magnitude of these statistics may be noted.

Section D.

Community Schools By District.

The following section contains 32 reports, one for each community school district. For each district, summary tables are presented listing certain demographic and pupil achievement percentages and statistics for each school within that district.

For instance, District 1 Table A presents the register and achievement data for each school within that district. Table B presents means and medians for each grade in each school within District 1 for the last three annual testings.

Each District's school results are presented in numerical sequence in this fashion.
